SuggestionProvider

Resolve heuristic rules into UI-facing field suggestions.

ConflictResolutionDialog

Ask the operator to resolve a conflict between AI suggestion and manual input.

Returns Accepted when user chooses the AI suggestion, Rejected for manual value.

suggest_for_context()

Return suggestions keyed by field for the given joint context.

Rules with support_count below min_support are suppressed.
Ranking uses maturity-boosted effective_confidence.

suggest_for_empty_fields()

Only propose values for fields that are currently empty.

apply_suggestion()

Injection-safe apply gate — returns sanitized value or blocks apply.

UI layers must call this before writing a suggested value into any widget.

resolve()

Show dialog when AI and manual values differ.

Returns (use_ai, final_value).
